

Relational Databases: Structured Query Language (SQL)

www.pdbmbook.com

Introduction

- Relational Database Management Systems and SQL
- SQL Data Definition Language
- SQL Data Manipulation Language
- SQL Views
- SQL Indexes
- SQL Privileges
- SQL for Metadata Management

Relational Database Management Systems and SQL

- Key Characteristics of SQL
- Three-Level Database Architecture

Key Characteristics of SQL

- First version, SQL-86 in 1986, most recent version in 2016 (SQL:2016)
- Accepted by the American National Standards Institute (ANSI) in 1986 and by the International Organization for Standardization (ISO) in 1987
- Each vendor provides own implementation (SQL dialect) of SQL

Key Characteristics of SQL

- Set-oriented and declarative
- Free form language
- Case insensitive
- Can be used interactively from a command prompt or executed by a program

Key Characteristics of SQL

The screenshot shows the MySQL Workbench interface. The top menu bar includes File, Edit, View, Query, Database, Server, Tools, Scripting, and Help. The left sidebar contains sections for MANAGEMENT (Server Status, Client Connections, Users and Privileges, Status and System Variables, Data Export, Data Import/Restore), INSTANCE (Startup / Shutdown, Server Logs, Options File), PERFORMANCE (Dashboard, Performance Reports, Performance Schema Setup), and SCHEMAS (purchaseadmin, which is expanded to show Tables: po_line, product, purchase_order, supplier, supplies, Views, Stored Procedures, Functions). The main area features a 'Query 1' tab with the following SQL code:

```
1 •  SELECT P.PRODNR, P.PRODNAME FROM PRODUCT P
  WHERE 1 <
        (SELECT COUNT(*)
         FROM PO_LINE POL
        WHERE P.PRODNR = POL.PRODNR)
```

The result grid displays the following data:

PRODNR	PRODNAME
0212	Billecart-Salmon, Brut Réserve, 2014
0977	Chateau Batailley, Grand Cru Classé, 1975
0900	Chateau Cheval Blanc, Saint Emilion, Grand Cru Classé, 1972
0306	Chateau Coupe Roses, Granaxa, 2011
0783	Clos D'Opleuwe, Chardonnay, 2012
0668	Gallo Family Vineyards, Grenache, 2014
0766	GH Mum, Brut, 2012
0178	Meerdael, Methode Traditionnelle Chardonnay, 2014
*	NULL
*	NULL

The bottom status bar shows the message "8 row(s) returned".

Key Characteristics of SQL

Java - Course/src/Chapter9/JDBCEExample.java - Eclipse

The screenshot shows the Eclipse IDE interface with the following details:

- File Menu:** File, Edit, Source, Refactor, Navigate, Search, Project, Run, Window, Help.
- Toolbars:** Standard toolbar with icons for file operations, search, and run.
- Left Sidebar:** Package Explorer showing the project structure under "Course".
- Central Area:** Editor tab titled "*JDBCEExample.java" containing Java code for connecting to a MySQL database and executing a query.
- Bottom Area:** Console tab showing the execution results of the code.

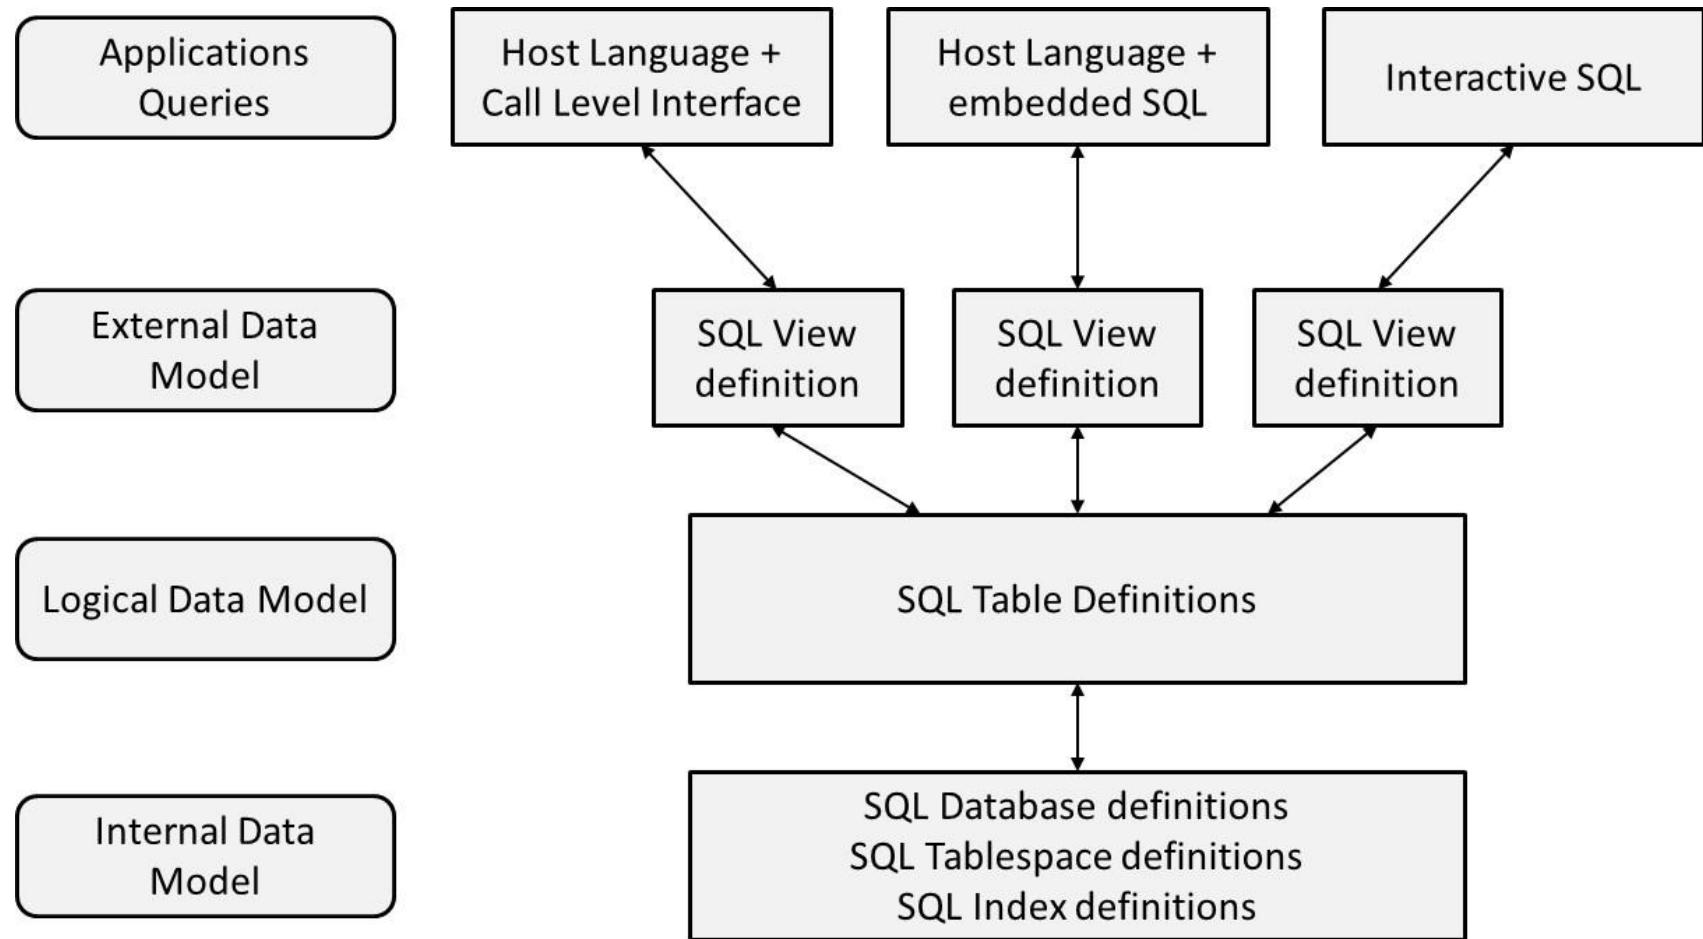

Java Code Content:

```
2
3 import java.sql.*;
4
5 public class JDBCEExample {
6
7     public static void main(String[] args) {
8
9         System.out.println("Connecting to the MySQL database...");
10
11        try {
12            System.out.println("Loading JDBC driver...");
13            Class.forName("com.mysql.jdbc.Driver");
14            System.out.println("JDBC driver successfully loaded!");
15        } catch (ClassNotFoundException e) {
16            throw new RuntimeException(e);
17        }
18
19        String url = "jdbc:mysql://localhost:3306/purchaseadmin";
20        String username = "root";
21        String password = "mypassword123";
22
23        String query="SELECT P.PRODNR, P.PRODNAME FROM PRODUCT P WHERE 1 < (SELECT COUNT(*) FROM PO_LINE POL "
24                + "WHERE P.PRODNR = POL.PRODNR)";
25
26        Connection connection = null;
27        Statement stmt=null;
28    }
}
```

Console Output:

```
<terminated> JDBCExample [Java Application] C:\Program Files\Java\jre1.8.0_45\bin\javaw.exe (27-jul-2015 21:29:20)
MySQL Database connected!
0212 Billecart-Salmon, Brut Réserve, 2014
0977 Chateau Batailley, Grand Cru Classé, 1975
0900 Chateau Cheval Blanc, Saint Emilion, Grand Cru Classé, 1972
0306 Chateau Coupe Roses, Granaxa, 2011
0783 Clos D'Opleeuw, Chardonnay, 2012
0668 Gallo Family Vineyards, Grenache, 2014
0766 GH Mum, Brut, 2012
0178 Meerdael, Methode Traditionnelle Chardonnay, 2014
Closing the connection.
```

Three-Level Database Architecture

SQL Data Definition Language

- Key DDL concepts
- DDL Example
- Referential Integrity Constraints
- DROP and ALTER command

Key DDL Concepts

- SQL Schema: grouping of tables and other database objects such as views, constraints and indexes which logically belong together

**CREATE SCHEMA PURCHASE AUTHORIZATION
BBAESENS**

- SQL table implements a relation from the relational model

CREATE TABLE PRODUCT ...

CREATE TABLE PURCHASE.PRODUCT ...

Key DDL Concepts

Data Type	Description
CHAR(n)	Holds a fixed length string with size n
VARCHAR(n)	Holds a variable length string with maximum size n
SMALLINT	Small integer (no decimal) between -32768 to 32767
INT	Integer (no decimal) between -2147483648 to 2147483647
FLOAT(n,d)	Small number with a floating decimal point. The total maximum number of digits is n with a maximum of d digits to the right of the decimal point.
DOUBLE(n,d)	Large number with a floating decimal point. The total maximum number of digits is n with a maximum of d digits to the right of the decimal point.
DATE	Date in format YYYY-MM-DD
DATETIME	Date and time in format YYYY-MM-DD HH:MI:SS
TIME	Time in format HH:MI:SS
BOOLEAN	True or False
BLOB	Binary Large Object (e.g. image, audio, video)

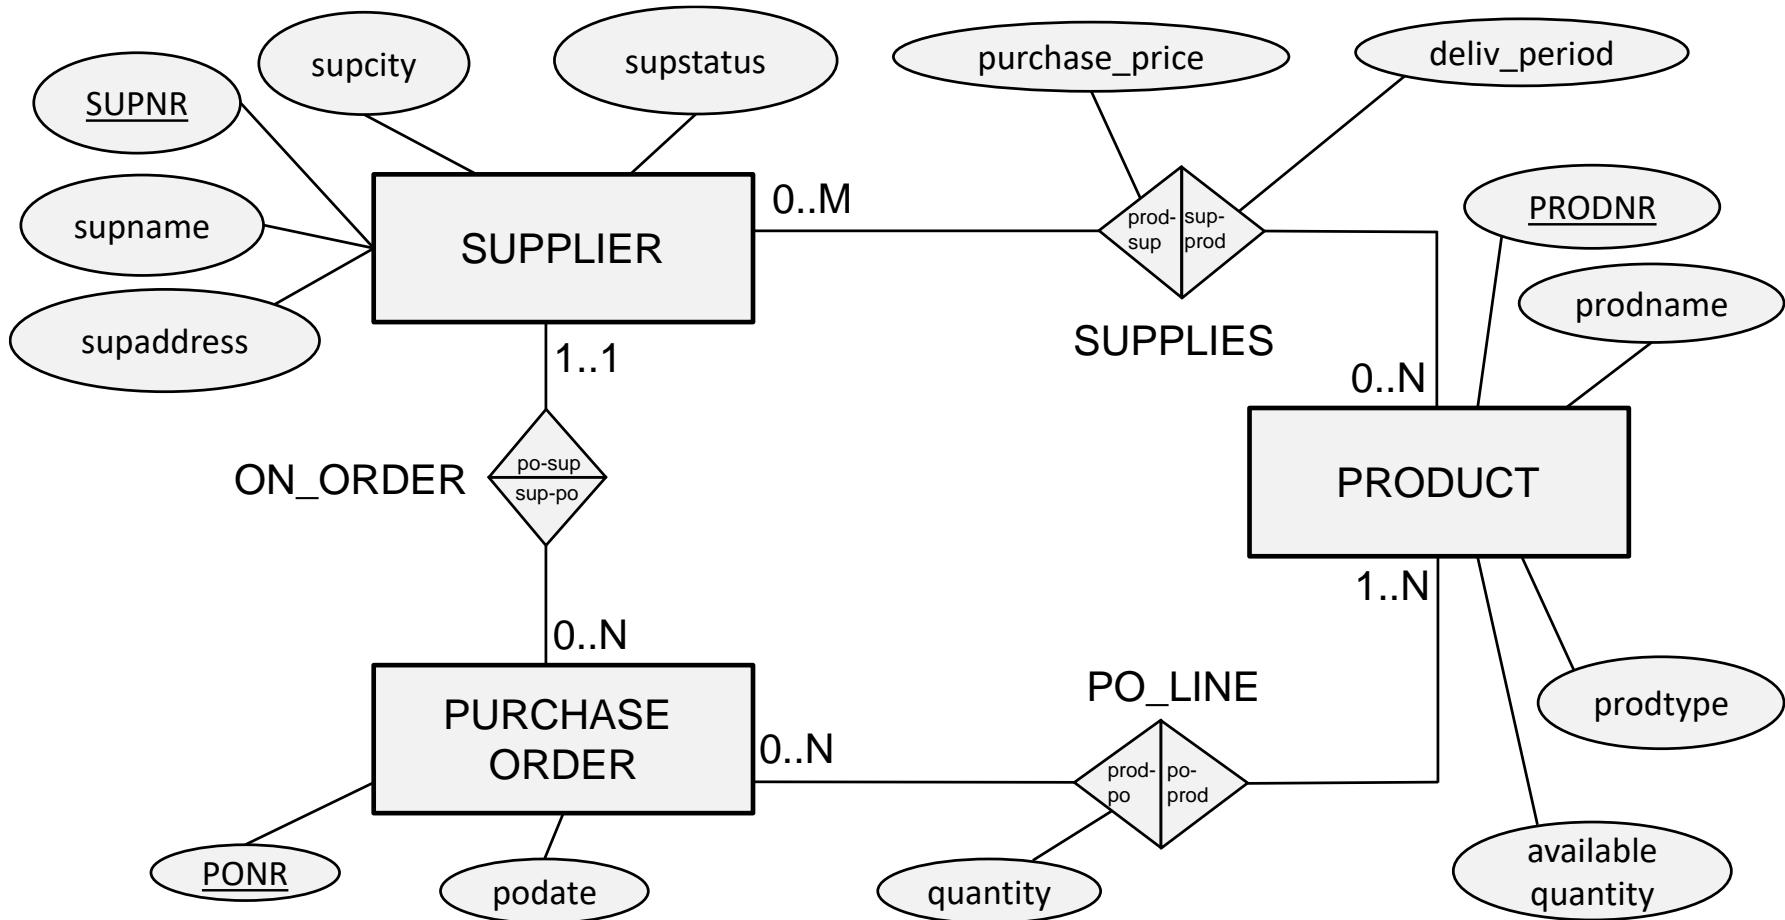

Key DDL Concepts

```
CREATE DOMAIN PRODTYPE_DOMAIN AS  
VARCHAR(10)  
CHECK (VALUE IN ('white', 'red', 'rose',  
'sparkling'))
```

Key DDL Concepts

- Column constraints
 - **PRIMARY KEY** constraint defines the primary key of the table
 - **FOREIGN KEY** constraint defines a foreign key of a table
 - **UNIQUE** constraint defines an alternative key of a table
 - **NOT NULL** constraint prohibits NULL values for a column
 - **DEFAULT** constraint sets a default value for a column
 - **CHECK** constraint defines a constraint on the column values

DDL Example

DDL Example

SUPPLIER(SUPNR, SUPNAME, SUPADDRESS, SUPCITY, SUPSTATUS)

PRODUCT(PRODNR, PRODNAME, PRODTYPE, AVAILABLE_QUANTITY)

SUPPLIES(SUPNR, PRODNR, PURCHASE_PRICE, DELIV_PERIOD)

PURCHASE_ORDER(PONR, PODATE, SUPNR)

PO_LINE(PONR, PRODNR, QUANTITY)

DDL Example

```
CREATE TABLE SUPPLIER
(SUPNR CHAR(4) NOT NULL PRIMARY KEY,
SUPNAME VARCHAR(40) NOT NULL,
SUPADDRESS VARCHAR(50),
SUPCITY VARCHAR(20),
SUPSTATUS SMALLINT)
```

```
CREATE TABLE PRODUCT
(PRODNR CHAR(6) NOT NULL PRIMARY KEY,
PRODNAME VARCHAR(60) NOT NULL,
CONSTRAINT UC1 UNIQUE(PRODNAME),
PRODTYPE VARCHAR(10),
CONSTRAINT CC1 CHECK(PRODTYPE IN ('white', 'red', 'rose', 'sparkling')),
AVAILABLE_QUANTITY INTEGER)
```

DDL Example

```
CREATE TABLE SUPPLIES
(SUPNR CHAR(4) NOT NULL,
 PRODNR CHAR(6) NOT NULL,
 PURCHASE_PRICE DOUBLE(8,2)
COMMENT 'PURCHASE_PRICE IN EUR',
DELIV_PERIOD TIME
COMMENT 'DELIV_PERIOD IN DAYS',
PRIMARY KEY (SUPNR, PRODNR),
FOREIGN KEY (SUPNR) REFERENCES SUPPLIER (SUPNR)
ON DELETE CASCADE ON UPDATE CASCADE,
FOREIGN KEY (PRODNR) REFERENCES PRODUCT (PRODNR)
ON DELETE CASCADE ON UPDATE CASCADE)
```

DDL Example

```
CREATE TABLE PURCHASE_ORDER  
(PONR CHAR(7) NOT NULL PRIMARY KEY,  
PODATE DATE,  
SUPNR CHAR(4) NOT NULL,  
FOREIGN KEY (SUPNR) REFERENCES SUPPLIER (SUPNR)  
ON DELETE CASCADE ON UPDATE CASCADE)
```

```
CREATE TABLE PO_LINE  
(PONR CHAR(7) NOT NULL,  
PRODNR CHAR(6) NOT NULL,  
QUANTITY INTEGER,  
PRIMARY KEY (PONR, PRODNR),  
FOREIGN KEY (PONR) REFERENCES PURCHASE_ORDER (PONR)  
ON DELETE CASCADE ON UPDATE CASCADE,  
FOREIGN KEY (PRODNR) REFERENCES PRODUCT (PRODNR)  
ON DELETE CASCADE ON UPDATE CASCADE)
```

Referential Integrity Constraints

- Foreign key has the same domain as the primary key it refers to and either occurs as a value of it or NULL
- What happens to foreign keys when primary key is updated or deleted?
- Options:
 - **ON UPDATE/DELETE CASCADE:** update/removal should be cascaded to all referring tuples
 - **ON UPDATE/DELETE RESTRICT:** update/removal is halted if referring tuples exist
 - **ON UPDATE/DELETE SET NULL:** foreign keys in the referring tuples are set to NULL
 - **ON UPDATE/DELETE SET DEFAULT:** foreign keys in the referring tuples are set to their default value

Referential Integrity Constraints

Supplier

SUPNR	SUPNAME	SUPADDRESS	SUPCITY	SUPSTATUS
21	Deliwines	240, Avenue of the Americas	New York	20
32	Best Wines	660, Market Street	San Francisco	90
37	Ad Fundum	82, Wacker Drive	Chicago	95
52	Spirits & co.	928, Strip	Las Vegas	NULL
68	The Wine Depot	132, Montgomery Street	San Francisco	10
69	Vinos del Mundo	4, Collins Avenue	Miami	92

Supplies

SUPNR	PRODNR	PURCHASE_PRICE	DELIV_PERIOD
37	0178	16.99	4
37	0185	32.99	3
37	0468	14.00	1
37	0795	20.99	3

Purchase_Order

PONR	PODATE	SUPNR
1511	2015-03-24	37
1513	2015-04-11	37
1523	2015-04-19	37
1577	2015-05-10	37
1594	2015-05-13	37

DROP and ALTER Command

- **DROP** command can be used to drop or remove database objects
 - can be combined with CASCADE and RESTRICT
- Examples:

DROP SCHEMA PURCHASE CASCADE

DROP SCHEMA PURCHASE RESTRICT

DROP TABLE PRODUCT CASCADE

DROP TABLE PRODUCT RESTRICT

DROP and ALTER Command

- **ALTER** statement can be used to modify table column definitions
- Examples:

ALTER TABLE PRODUCT ADD PRODIMAGE BLOB

**ALTER TABLE SUPPLIER ALTER SUPSTATUS SET
DEFAULT '10'**

DROP and ALTER Command

SUPPLIER

<u>SUPNR</u>	<u>SUPNAME</u>	<u>SUPADDRESS</u>	<u>SUPCITY</u>	<u>SUPSTATUS</u>
21	Deliwines	240, Avenue of the Americas	New York	20
32	Best Wines	660, Market Street	San Francisco	90
...				

PRODUCT

<u>PRODNR</u>	<u>PRODNAME</u>	<u>PRODTYPE</u>	<u>AVAILABLE_QUANTITY</u>

SQL Data Manipulation Language (SQL DML)

- SQL SELECT Statement
- SQL INSERT Statement
- SQL DELETE Statement
- SQL UPDATE Statement

SQL SELECT Statement

- Overview
- Simple Queries
- Queries with Aggregate Functions
- Queries with GROUP BY/HAVING
- Queries with ORDER BY
- Join Queries
- Nested Queries
- Correlated Queries
- Queries with ALL/ANY
- Queries with EXISTS
- Queries with subqueries in FROM/WHERE
- Queries with Set operations

Overview

SELECT component

FROM component

[**WHERE** component]

[**GROUP BY** component]

[**HAVING** component]

[**ORDER BY** component]

Overview

- Result of SQL SELECT statement is a multiset, and not a set!
- In a multiset (bag), the elements are not ordered but there can be duplicates
- Examples: set {10, 5, 20} and multiset {10, 5, 10, 20, 5, 10}
- SQL does not eliminate duplicates
 - duplicate elimination is expensive
 - user may want to see duplicate tuples
 - duplicates may be considered by aggregate functions

Simple Queries

- SQL statements that retrieve data from only one table

**Q1: SELECT SUPNR, SUPNAME, SUPADDRESS,
SUPCITY, SUPSTATUS FROM SUPPLIER**

Q1: SELECT * FROM SUPPLIER

Simple Queries

SUPNR	SUPNAME	SUPADDRESS	SUPCITY	SUPSTATUS
21	Deliwines	240, Avenue of the Americas	New York	20
32	Best Wines	660, Market Street	San Francisco	90
37	Ad Fundum	82, Wacker Drive	Chicago	95
52	Spirits & co.	928, Strip	Las Vegas	NULL
68	The Wine Depot	132, Montgomery Street	San Francisco	10
69	Vinos del Mundo	4, Collins Avenue	Miami	92

Simple Queries

Q2: SELECT SUPNR, SUPNAME FROM SUPPLIER

SUPNR	SUPNAME
21	Deliwines
32	Best Wines
37	Ad Fundum
52	Spirits & co.
68	The Wine Depot
69	Vinos del Mundo

Simple Queries

**Q3: SELECT SUPNR
FROM PURCHASE_ORDER**

SUPNR
32
32
37
37
37
37
37
68
69
94

Simple Queries

Q4: SELECT DISTINCT SUPNR FROM PURCHASE_ORDER

SUPNR
32
37
68
69
94

Simple Queries

**Q5: SELECT SUPNR, PRODNR, DELIV_PERIOD/30 AS
MONTH_DELIV_PERIOD FROM SUPPLIES**

SUPNR	PRODNR	MONTH_DELIV_PERIOD
21	0119	0.0333
21	0178	NULL
21	0289	0.0333
21	0327	0.2000
21	0347	0.0667
21	0384	0.0667
...

Simple Queries

**Q6: SELECT SUPNR, SUPNAME FROM SUPPLIER
WHERE SUPCITY = 'San Francisco'**

SUPNR	SUPNAME	SUPSTATUS
32	Best Wines	90
68	The Wine Depot	10

Simple Queries

**Q7: SELECT SUPNR, SUPNAME FROM SUPPLIER
WHERE SUPCITY = 'San Francisco' AND
SUPSTATUS > 80**

SUPNR	SUPNAME	SUPSTATUS
32	Best Wines	90

Simple Queries

**Q8: SELECT SUPNR, SUPNAME, SUPSTATUS
FROM SUPPLIER WHERE SUPSTATUS BETWEEN
70 AND 80**

SUPNR	SUPNAME	SUPSTATUS
94	The Wine Crate	75

Simple Queries

**Q9:SELECT PRODNR, PRODNAME
FROM PRODUCT
WHERE PRODTYPE IN ('WHITE', 'SPARKLING')**

PRODNR	PRODNAME
0178	Meerdael, Methode Traditionnelle Chardonnay, 2014
0199	Jacques Selosse, Brut Initial, 2012
0212	Billecart-Salmon, Brut Réserve, 2014
0300	Chateau des Rontets, Chardonnay, Birbettes
0494	Veuve-Cliquot, Brut, 2012
0632	Meneghetti, Chardonnay, 2010
...

Simple Queries

Q10: **SELECT PRODNR, PRODNAME**
FROM PRODUCT
WHERE PRODNAME LIKE '%CHARD%'

PRODN R	PRODNAME
0300	Chateau des Rontets, Chardonnay, Birbettes
0783	Clos D'Opleeuw, Chardonnay, 2012
0178	Meerdael, Methode Traditionnelle
	Note: underscore (<u>_</u>) is a substitute for a single character! Chardonnay, 2014

Simple Queries

**Q11: SELECT SUPNR, SUPNAME, SUPSTATUS
FROM SUPPLIER
WHERE SUPSTATUS IS NULL**

SUPNR	SUPNAME	SUPSTATUS
52	Spirits & Co.	NULL

Queries with Aggregate Functions

- Examples: COUNT, SUM, AVG, VARIANCE, MIN/MAX, and STDEV

<i>SUPNR</i>	<i>PRODNR</i>	PURCHASE_PRICE	DELIV_PERIOD
...			
21	0178	NULL	NULL
37	0178	16.99	4
68	0178	17.99	5
69	0178	16.99	NULL
94	0178	18.00	6
...			

Queries with Aggregate Functions

Q12: **SELECT COUNT(*)
FROM SUPPLIES
WHERE PRODNR = '0178'**

5

Q13: **SELECT COUNT(PURCHASE_PRICE)
FROM SUPPLIES
WHERE PRODNR = '0178'**

4

Q14: **SELECT COUNT(DISTINCT PURCHASE_PRICE)
FROM SUPPLIES
WHERE PRODNR = '0178'**

3

Queries with Aggregate Functions

Q15: **SELECT PRODNR, SUM(QUANTITY) AS SUM_ORDERS FROM PO_LINE WHERE PRODNR = '0178'**

PON	PRODN	QUANTIT
R	R	Y
...		
1512	0178	3
1538	0178	6
...		0178 9

Queries with Aggregate Functions

Q16: `SELECT SUM(QUANTITY) AS
TOTAL_ORDERS FROM PO_LINE`

173

Queries with Aggregate Functions

Q17: `SELECT PRODNR, AVG(PURCHASE_PRICE) AS WEIGHTED_AVG_PRICE FROM SUPPLIES WHERE PRODNR = '0178'`

<u>SUPNR</u>	<u>PRODNR</u>	PURCHASE_PRICE	DELIV_PERIOD
...			
21	0178	NULL	NULL
37	0178	16.99	4
68	0178	17.99	5
69	0178	16.99	NULL
94	0178	18.00	6
...			

$$0178, (16.99+17.99+16.99+18.00)/4 = 17.4925$$

Queries with Aggregate Functions

Q18: **SELECT PRODNR, AVG(DISTINCT PURCHASE_PRICE)AS UNWEIGHTED_AVG_PRICE
FROM SUPPLIES WHERE PRODNR = '0178'**

<u>SUPNR</u>	<u>PRODNR</u>	PURCHASE_PRICE	DELIV_PERIOD
...			
21	0178	NULL	NULL
37	0178	16.99	4
68	0178	17.99	5
69	0178	16.99	NULL
94	0178	18.00	6
...			

$$0178, (16.99+17.99+18.00)/3 = 17.66$$

Queries with Aggregate Functions

- Q19: **SELECT PRODNR, VARIANCE(PURCHASE_PRICE)
AS PRICE_VARIANCE FROM SUPPLIES
WHERE PRODNR = '0178'**

PRODNR	PRICE_VARIANCE
0178	0.2525187500000024

Queries with Aggregate Functions

```
Q20: SELECT PRODNR, MIN(PURCHASE_PRICE) AS LOWEST_PRICE,  
       MAX(PURCHASE_PRICE) AS HIGHEST_PRICE  
     FROM SUPPLIES  
    WHERE PRODNR = '0178'
```

PRODNR	LOWEST_PRICE	HIGHEST_PRICE
0178	16.99	18.00

Queries with GROUP BY/HAVING

Q21: `SELECT PRODNR

Queries with EXISTS

- EXISTS function checks whether the result of a correlated nested query is empty or not
- The result is a Boolean value: TRUE or FALSE
- EXISTS returns TRUE if there is at least one tuple in the result of the nested query, or otherwise returns FALSE
- Vice versa, the NOT EXISTS function returns TRUE if there are no tuples in the result of the nested query, or otherwise returns FALSE

Queries with EXISTS

SQL Views

- SQL views are part of the external data model
- A view is defined by means of an SQL query and its content is generated upon invocation of the view by an application or other query
- A view is a virtual table without physical tuples
- Views allow for logical data independence which makes them a key component in the three-layer database architecture

SQL Views

```
CREATE VIEW TOPSUPPLIERS
AS SELECT SUPNR, SUPNAME FROM SUPPLIER
WHERE SUPSTATUS > 50
```

```
CREATE VIEW TOPSUPPLIERS_SF
AS SELECT * FROM TOPSUPPLIERS
WHERE SUPCITY='San Francisco'
```

SQL Views

```
CREATE VIEW ORDEROVERVIEW(PRODNR,  
PRODNAME, TOTQUANTITY)  
AS SELECT P.PRODNR, P.PRODNAME,  
SUM(POL.QUANTITY)  
FROM PRODUCT AS P LEFT OUTER JOIN  
PO_LINE AS POL  
ON (P.PRODNR = POL.PRODNR)  
GROUP BY P.PRODNR
```

SQL Views

```
SELECT * FROM TOPSUPPLIERS_SF
```

```
SELECT * FROM ORDEROVERVIEW  
WHERE PRODNAME LIKE '%CHARD%'
```

SQL Views

- Query modification: RDBMS modifies queries that query views into queries on the underlying base tables
- View materialization: a physical table is created when the view is first queried

SQL Views

- Some views can be updated
 - In this case, the view serves as a window through which updates are propagated to the underlying base table(s)

SQL Views

```
CREATE VIEW ORDEROVERVIEW(PRODNR, PRODNAME,  
TOTQUANTITY)  
AS SELECT P.PRODNR, P.PRODNAME, SUM(POL.QUANTITY)  
FROM PRODUCT AS P LEFT OUTER JOIN PO_LINE AS POL  
ON (P.PRODNR = POL.PRODNR)  
GROUP BY P.PRODNR
```

```
UPDATE VIEW ORDEROVERVIEW  
SET TOTQUANTITY=10  
WHERE PRODNR= '0154' ERROR!
```

SQL Views

- WITH CHECK option checks UPDATE and INSERT statements for conformity with the view definition

```
CREATE VIEW TOPSUPPLIERS  
AS SELECT SUPNR, SUPNAME FROM SUPPLIER  
WHERE SUPSTATUS > 50  
WITH CHECK OPTION
```

```
UPDATE TOPSUPPLIERS  
SET STATUS =20          OK!  
WHERE SUPNR='32'
```

```
UPDATE TOPSUPPLIERS  
SET STATUS =80          NOT OK!  
WHERE SUPNR='32'
```

SQL Privileges

- A privilege corresponds to the right to use certain SQL statements such as SELECT, INSERT, etc. on one or more database objects

Privilege	Explanation
SELECT	Provides retrieval privilege
INSERT	Gives insert privilege
UPDATE	Gives update privilege
DELETE	Gives delete privilege
ALTER	Gives privilege to change the table definition
REFERENCES	Provides the privilege to reference the table when specifying integrity constraints.
ALL	Provides all privileges (DBMS specific)

SQL Privileges

**GRANT SELECT, INSERT, UPDATE, DELETE ON SUPPLIER TO
BBAESENS**

**GRANT SELECT (PRODNR, PRODNAME) ON PRODUCT TO
PUBLIC**

REVOKE DELETE ON SUPPLIER FROM BBAESENS

**GRANT SELECT, INSERT, UPDATE, DELETE ON PRODUCT TO
WLEMAHIEU WITH GRANT OPTION**

GRANT REFERENCES ON SUPPLIER TO SVANDENBROUCKE

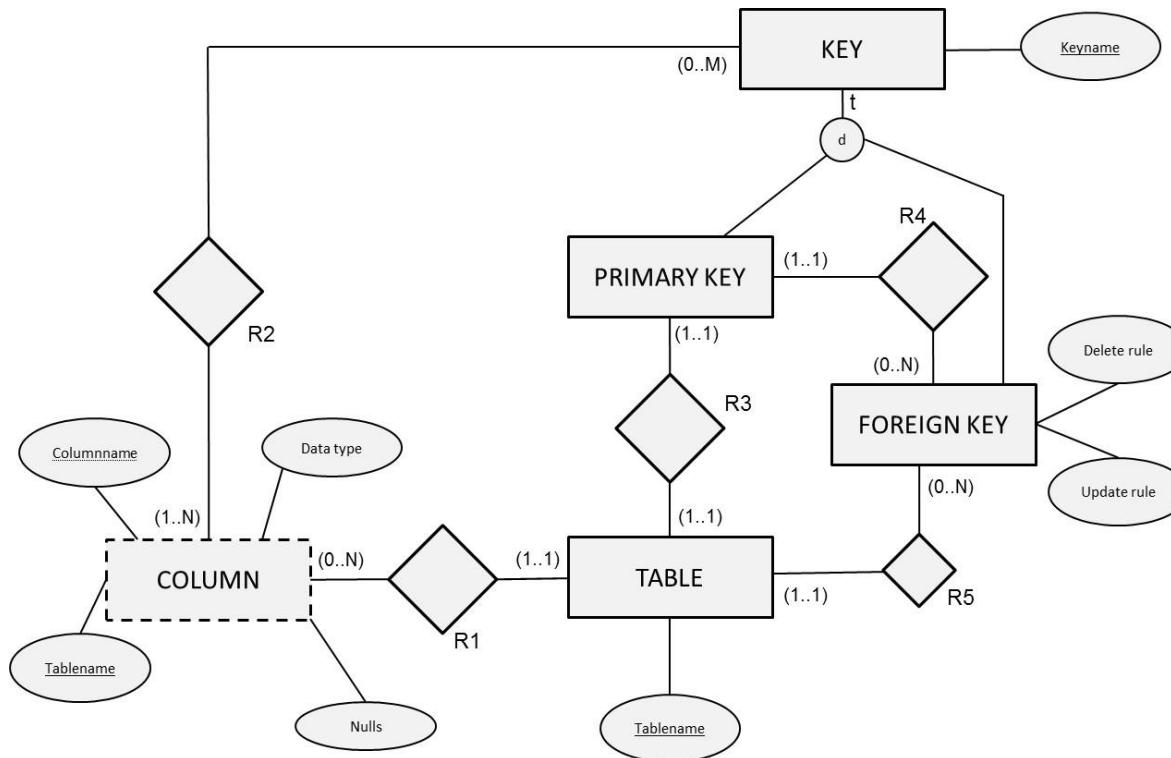

SQL Privileges

```
CREATE VIEW SUPPLIERS_NY
AS SELECT SUPNR, SUPNAME FROM SUPPLIERS
WHERE SUPCITY='New York'
```

```
GRANT SELECT ON SUPPLIERS_NY TO
WLEMAHIEU
```

SQL for Metadata Management

- Catalog itself can also be implemented as a relational database

SQL for Metadata Management

Table(Tablename, ...)

Key(Keyname, ...)

Primary-Key(PK-Keyname, PK-Tablename, ...)

PK-Keyname is a foreign key referring to Keyname in Key

PK-Tablename is a foreign key referring to Tablename in Table

Foreign-Key(FK-Keyname, FK-Tablename, FK-PK-Keyname, Update-rule, Delete-rule, ...)

FK-Keyname is a foreign key referring to Keyname in Key

FK-Tablename is a foreign key referring to Tablename in Table

FK-PK-Keyname is a foreign key referring to PK-Keyname in Primary-Key

Column(Columnname, C-Tablename, Data type, Nulls, ...)

C-Tablename is a foreign key referring to Tablename in Table

Key-Column(KC-Keyname, KC-Columnname, KC-Tablename, ...)

KC-Keyname is a foreign key referring to Keyname in Key

KC-Columnname is a foreign key referring to Columnname in Column

KC-Tablename is a foreign key referring to C-Tablename in Column

SQL for Metadata Management

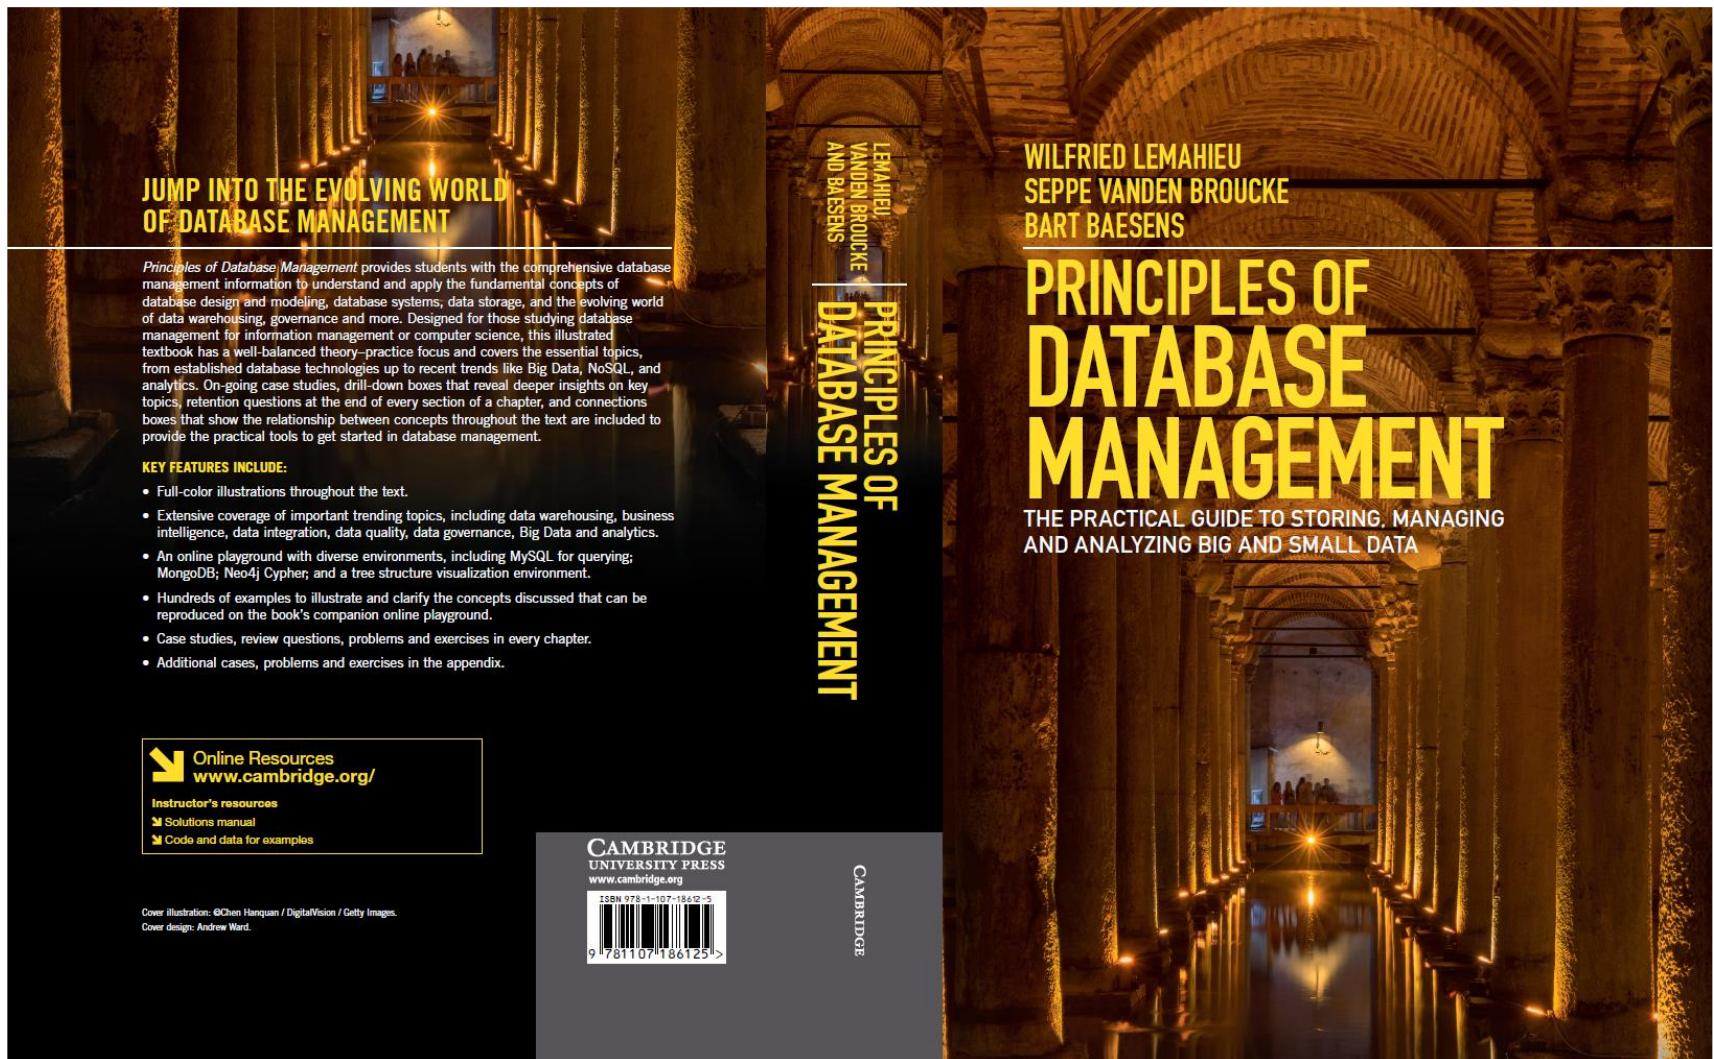

```
SELECT *
FROM Column
WHERE Tablename='SUPPLIER'
```

```
SELECT PK.PK-Keyname, FK.FK-PK-Keyname, FK.FK-
Tablename, FK.Delete-rule
FROM Primary-Key PK, Foreign-Key FK
WHERE PK.PK-Tablename='SUPPLIER'
AND PK.PK-Keyname= FK.FK-PK-Keyname
```

Conclusions

- Relational Database Management Systems and SQL
- SQL Data Definition Language
- SQL Data Manipulation Language
- SQL Views
- SQL Privileges
- SQL for Metadata Management
